Enclosed is a copy of the current program to control Aroclor pollution. Item III deals with eliminating sewerage PCB's from using departments. "Eliminate" is the key. The plant goal is 10 PPB which is equivalent to 2.3 lbs/day from the treatment plant. Some sort of extraction process or carbon treatment will be required to approach this level at the Aroclor department itself. This means essentially zero sewer losses from the using departments.

Your cooperation in achieving this objective is needed. Feedback on plans no later than 8/15 would be appreciated. Latest word is that the Feds plan a stepped up attack on PCB's in July.
